

Pharmaceutical transport in accordance with GDP guidelines

New GDP guidelines for transporting pharmaceutical and medicinal products come into effect on 1 January 2016 (Guidelines of Good Distribution Practice of Medical Products for Human Use). The new guidelines incorporate more stringent requirements in terms of temperature monitoring, which apply equally to package shipment. **A new requirement is for a continuous temperature monitoring with temperature recording – from pick-up right through to delivery.**

We have adapted our operations to comply with these guidelines. We use vehicles especially designed for this purpose along with special temperature zones in the cargo handling areas to guarantee **flawless shipment** of your pharmaceutical packages, **while maintaining a continuous temperature monitoring.** We will pick up goods from your plant today and deliver them to the specified recipient tomorrow.

OUR SERVICES – YOUR BENEFITS

- Your packages are transported and handled in compliance with GDP guidelines.
- High-quality and efficient delivery to your customers, while maintaining a continuous temperature monitoring.
- You can track your shipment online at all times.
- Qualified employees take care of your packages.

Do you have any questions or require more information?

We are pleased to be at your service.
